PRIMARY FOCUS

Python scraping, browser automation, and structured data workflows.

RESEARCH CONTEXT

University co-author on TikTok and medical statistics education research.

TOOLING STRENGTH

MCP, exports, desktop tools, and practical AI-facing developer systems.

PROFESSIONAL SUMMARY

Second-year medical student with hands-on experience building Python scraping systems, browser automation workflows, AI tooling, and research-oriented data pipelines. Built dynamic-site collection workflows with Playwright, structured export systems for analysis, and AI-facing tooling with MCP. Co-authored a 2026 university research paper on TikTok content and medical statistics education using a Python-based public data collection workflow.

CORE SKILLS

SCRAPING

PYTHON | PLAYWRIGHT | WEB SCRAPING | BROWSER AUTOMATION

DATA

STRUCTURED DATA PIPELINES | JSONL / CSV / SQLITE | DATA NORMALIZATION | EXPORT TOOLING

TOOLING

TYPESCRIPT | MCP TOOLING | AUTOMATION WORKFLOWS | GIT / GITHUB

SUPPORTING

C# / .NET | NEXT.JS | VITEST | RESEARCH SUPPORT | DESKTOP APPS | LOCAL SYSTEMS TOOLING | AI-FACING DEVELOPER TOOLS

EDUCATION

Doctor of Medicine (MD), English Program

CURRENT

FACULTY OF MEDICINE, UNIVERSITY OF NIS

Second-year medical student with research work in medical statistics and educational content analysis.

RELEVANT EXPERIENCE

TikTok Scraper and Research Export Pipeline

2026

- Built a Python + Playwright workflow to collect public TikTok data from dynamic pages, normalize records, deduplicate outputs, and export analysis-ready datasets.
- Structured exports for JSONL, CSV, and SQLite-backed workflows so the data could move cleanly into review and analysis.
- Used the project in support of a university research study on TikTok content and medical statistics education.

Obsidian MCP Server

2026

- Built a TypeScript MCP server that gives AI assistants structured access to note collections, including search, writing, link analysis, graph traversal, and canvas support.
- Designed practical AI tooling around real workflows rather than demo-only interactions.

Desktop and Systems Tooling

2026

- Built Windows desktop software in C# and .NET, including PC Guardian and PC Guardian Remote.
- Worked across Python, TypeScript, and C# depending on the product surface and operational constraints.

SELECTED PROJECTS

TikTok Scraper and Research Export Pipeline

PYTHON, PLAYWRIGHT, SQLITE, JSONL, CSV

Dynamic-site public data collection workflow tied to research-oriented analysis and export.

Co-Authored Medical Statistics Research Paper

RESEARCH, PYTHON WORKFLOW, EVALUATION FRAMEWORKS

University paper examining TikTok content as a source of education in medical statistics.

Obsidian MCP Server

TYPESCRIPT, MCP, AI TOOLING

Structured note search, writing, graph traversal, and canvas support for AI-assisted workflows.

PC Guardian / PC Guardian Remote

C#, .NET, WINFORMS, SQLITE

Desktop systems tooling showing end-to-end shipping ability beyond web-only work.
